

Functional requirement	Class Name	Method name
Register Project	Class Administrator	addProject()
	Class Main	registerProject() getProjects()
Search Projects	Class Administrator	getProjects(...) projectWithMoreBudges() getBudges(...)
	Class Main	searchProjectMoreBudges()
Stage compliance approval	Class Main	finishStage()
	Class Administrator	finishStage(...)
	Class Project	culminateStage(...) StartStageNext(...)
	Class Stage	isStageApproved(...)
Registration of knowledge capsules	Class Main	registerBudge()
	Class Administrator	addBudgeToCurrentStage(...)
	Class Project	getStageActual(...)
	Class Budge	addCollaborator(...)
Approval of capsules	Class Main	approvedBudge()C
	Class Administrator	approvedBudges(...)
	Class Project	getNumStageActual()
	Class Budge	isApproved() setApproved(...)
Publication of capsules	Class Main	publishedBudge()
	Class Administrator	PublishedBudgeApproved(...) getNumBudges() getBudges()
	Class Budge	isApproved()

		isPublished() setPublished(...)
<b>Capsule consultation</b>	Class Main	searchBudesRegisterLesson()
	Class Administrator	searchBudes(...) getBudes()
<b>Search Budes by type</b>	Class Main	budesForType()
	Class Administrator	createBudgeReport() getBudes()
<b>Search Budes by collaborator</b>	Class Main	searchCollaboratorBudge()
	Class Administrator	searchCollaborator(...) getBudes()
<b>Search list lesson learned</b>	Class Main	searchLessonLearned()
	Class Administrator	searchLessonLearned(...) getBudes(...)
	Class Project	getStage(...)
